TWS, Bluepoint develop Check 21 solution

CLEARWATER, Fla. (12/20/04)--TWS Systems Inc. and Bluepoint Solutions have announced a partnership to develop image capture technology for front counter use.

ImageCenter Teller Capture uses image-recognition technology to enable credit unions to capture transaction data and images at teller stations.

The product will help credit unions meet the requirements of Check 21 and also help prevent fraud. It is independent of core-processing systems so any credit union can take advantage of image-capturing without system upgrades, according to TWS Systems President Milton King.

TWS Systems offers total deposit automation with image-based ATMs and provides transaction processing solutions and fraud prevention tools.

Bluepoint Solutions is a provider of document imaging and electronic records management software.
