## TWS and Bluepoint Solutions Partner to Offer Teller Image Capture Solution for Credit Unions

### Partnership provides comprehensive Check 21 solution

CLEARWATER, Fla. - TWS Systems, Inc., a leader in ATM management and transaction processing solutions for financial institutions and the first company to offer total automation with imaged-ATMs, announced today a partnership with Bluepoint Solutions, a California-based provider of document imaging and electronic records management software, to co-develop front counter image capture technology for credit unions.

The product, ImageCenter Teller Capture, builds on the established brand IMAGECENTER BY TWS, the company's flagship product, which uses the latest in image-recognition technology to automate the balance and processing of incoming and outgoing transactions. The partnership enables credit unions to capture transaction data and images at the earliest possible point – the teller. By combining the power of the ImageCenter platform with Bluepoint's data capture technology, the partnership provides clients with a comprehensive solution to take advantage of the Check Clearing for the 21st Century Act (Check 21) and also prevent fraud.

"To remain competitive in a constantly changing environment, credit unions must intelligently apply technology to meet business needs," said Milton King, president of TWS Systems. "The technology offered through this partnership gives our clients an immediate advantage allowing them to capture images at the earliest point of presentment. Clients will be able to save processing costs, offer innovative services, minimize exposure to fraud and deliver a great value to its members. Because our solution is independent of the core data processing provider, we can offer this solution to any credit union."

ImageCenter Teller Capture gives institutions the ability to capture information independent of the host provider. By offering a solution that is processor independent, TWS and Bluepoint Solutions are enabling credit unions to take advantage of teller image capture without expensive upgrades to their existing systems, while maintaining the flexibility to upgrade in the future.

"Best practices mandate capture at the point of presentment," said Hal Tilbury, founder and president of Bluepoint Solutions. "By co-developing the ImageCenter Teller Capture, the combined strengths of our two firms offer customers a complete Check 21 capability. Our expertise in the image capture arena, combined with TWS System's years of experience in back-office processing, provides a very synergistic partnership validating the comprehensive nature of image capture technology."
